

MANAGING SHORT TERM LIQUIDITY NEEDS WITH DEBT

Planning for future entails both short term as well as long term needs. It is important to secure and strengthen both and thus attempt to juggle out our investments for both our near future and for our distant future needs. However sometimes we often fail to give adequate attention to our immediate and short term money management needs to the same extent as we do to the long term needs. This fact is most visibly demonstrated in our short term borrowing habits.

When we are in need of some funds, what do we do? It might be due to business capital needs or some unforeseen events or for funding some purchases and so on. So what do we do? There are two plausible solutions to the dilemma in absence of adequate emergency funds:

LIQUIDATE YOUR ASSETS

One option is you can cash out your long term assets to meet the temporary liquidity need. Leaving aside your assets like gold due to its attachment. financial emotional assets like Bank FD's or mutual funds are often seen as easy solutions. Quite often we may even find that mutual funds are easily redeemed since it's more 'liquid' without considering the current market scenario or the long term impact it may have on our wealth creation plans or life goals. Liquidating Bank FD's may be a better idea but then again, one has to respect his/her risk profile & long term needs too, so as to not compromise on other life goals.

TAKE A LOAN

Another option not necessarily involving any asset sale under stress, is to arrange for a short /medium term borrowing. Most often, this option is exercised to temporarily bridge a liquidity gap. The good thing about taking a loan is it's easy and timely available, depending upon your relationship with the bank/financial institution. Often there aren't too

many operational hurdles involved, one can get the money in a week's time from applying. Although a handy and preferred option, one must remember that any loan or borrowing comes at a cost and the cost is interest. There are different types of loan > There may be some prepayment options available in the market carrying different features and having different interest rates and terms. As such, it becomes very important that you know the basic / key features of any product, it's advantages & disadvantages, before you opt for one.

Here are a few options available for you to choose from:

01 PERSONAL LOAN: One of the most of meeting common methods temporary cash crunch is you can avail a personal loan from banks or other financial institutions.

Key points to consider:

- ▶ They are quick and hassle free, especially for smaller amounts.
- Generally no mortgages or guarantors are required depending upon your financial standing.

- ▶ Interest rates are often high, in double diaits.
- ▶ If your CIBIL score is not high, then either you might not get the loan altogether or the rates charged can be higher.
- period limitations and they may carry percentage charges. One has to clear these things out and negotiate if required and get the terms stated clearly in agreement.
- ► Late payment of EMIs may attract very high interest rates, so one should be careful that all EMIs are paid in time.

02 CREDIT CARD: Another super simple method for temporary financing is to swipe your credit card. However, this option is suitable for smaller amounts needed on urgent basis and/or only when other options are not available.

Key points to consider:

Credit Card financing is available in your pocket! There are two ways of using a credit card :- (i) making payments to merchants, and (ii) taking cash advance.

- Enjoy some interest free credit period, say 20 to 50 days normally, on CC spending as per your payment cycle.
- No extra documentation or formalities for cash advance. However, only limited amount can be withdrawn as a percentage of credit limit.
- ▶ You can pay only the minimum balance, which is a small percentage of the total bill amount, generally around 5%, without incurring any penalty. The rest gets rolled over.
- Exorbitant interest rates are charged on all cash advances and amounts getting rolled over. Rates can range from 1.5% to 3% per month, that is a whopping 18% - 36% per annum, the highest in all sorts of organized debts.
- You may get some benefits like reward points. However, there may be extra costs too like renewal fees, processing charges for cash advances, merchant > An excellent tool providing liquidity to charges for CC payments, high charges for services, etc., which one needs to consider.

03 OVERDRAFT / CASH CREDIT: A financing facility, now also available to salaried persons in addition to 🕨 business persons. This is very popular in business community for the convenience it provides in managing funds, especially for timing mismatch of payments.

Key points to consider:

- Interest is payable on the amount actually used and not on the entire amount sanctioned
- ▶ Interest rate here is comparatively lower than Personal Loan or Credit > Interest is charged only on the funds

Card debt but still high.

- ▶ If the overdraft limits are exceeded, the additional charges can be high.
- The overdraft limits are often revised by banks and one has to be careful.
- The borrower has to provide a collateral like shares, insurance policies, etc., and these may be seized if payments fail.
- Over dependence on overdraft be facilities may signs of mismanagement of working capital.

04 LOAN AGAINST SECURITIES (LAS): This is the least popular but a terrific option which is available to everyone. The loan can be taken against investments in the Capital Market, like Equity/Debt mutual funds, shares, RBI Bonds. etc.

Key points to consider:

- investors against investments without the need to liquidate them. Thus, anyone with investments can avoid selling at distressed prices and compromising on their financial goals.
- The investments continue to be invested and earn returns as expected. Since the investors' securities are pledged to get the loan, there is no need of a guarantor or a mortgage.
- Amount sanctioned is a percentage of investments pledged, depending on the nature of the investments.
- Available at competitive rates between 10.25 to 11.00%, often least among all other options.

used by the client and not on the entire sanctioned amount.

- ▶ Loan can be repaid partially / fully at any time as per convenience.
- ▶ Convenient, hassle free and quick process for release of funds and repayment. Can even be done online /digitally.

LAS @ NJ

NJ has come up with the Online Loan against Securities facility for investors. Since it is digital, securities are pledged and E-signed and loan is sanctioned immediately. No physical documents are required for the sanction. Since there are so many investors who have invested in shares, Mutual Funds, Bonds, etc., for the long term and do not wish to liquidate their assets mid-way, LAS is a great option which provides the required funds and leaves the investments untouched. You may contact your advisor / NJ Wealth Partner for more details.

Conclusion:

Each one of us have faced or may face a liquidity crisis. Being aware of the credit options available and their costs will not only help you in meeting your fund needs but also in ensuring that your overall financial plans are not disturbed. Having said so, remember that adequate emergency funds should be your first source of financing and everyone must strive to create an emergency fund for self. Proper planning and being strict with your finances is how proper discipline in finances can be cultured.

R. BUY V/S MR. RENT? S

The age old Indian Investment doctrine is: the first thing to do when you start earning is "Buy a House", the sooner the better. This way you would build an asset, and stretching your means to finance the house, inculcates thrift at an early age.

Times though have changed now. Owning a home is not something which the new

generation of young working professionals see as a matter of pride or status or even as a security. Quite the opposite, many today see owning a home as a bigger liability and a limiting factor to living an aspiring and a life. Today, car, happening vacations and other white goods

occupy a higher rank on the priority list, much before one even thinks of buying a house. However, there is no denying the fact that the question of buying a house is increasingly being seen as an career-oriented economical, decision, rather than a mere societal and emotional one.

At the center of this economical decision is the Buy Vs. Rent. This is a puzzle that many are trying to figure out. Both have their advantages and disadvantages and before saying anything, let us see the arguments of Ajay and Vijay who find themselves at different ends of this question.

Ajay: I am strongly in favour of renting out. I am young and there is no need to get tied up in any particular city especially when I am not sure in which city I would be living in after few years! I would

like to have the flexibility of changing homes as per mv preference and locality, whenever I wish. I simply feel free by not getting bogged down by heavy EMIs. This way I can enjoy my life more and even save some money to start my own business few years down the line.

Vijay: That's naive to think, owning a house adds burden. Think of it this way, one day you will have to buy a 🗲 house, so why not today when you have the maximum time left to pay off your EMIs. I assume that your income will only increase

from here and property prices are unlikely to fall dramatically. Besides, owing a house gives you additional sense of security in life knowing that at least you have a roof on your head. In case you wish to move out, you can also put your house on rent to get a second income source. The house stays yours and will appreciate in value too.

Ajay: Frankly, I am not convinced on that front. Purely on economical terms, have you also factored in expenses like property registration, maintenance, society dues, etc., apart from all the expenses you will make in your house to spruce it up? As a tenant, I never have to worry about all these things. Besides, I cannot afford to live in a home of my choice given the property prices today. I will have to live out of my skin to pay the EMI's and I have to forget about weekend drives and my vacations. No bro, a house is not my cup of tea at this time

Vijay: To be honest, I haven't actually calculated any figures.

Ajay: Why not then work out the calculations first, instead of arguing on general ideas about life. Let the figures do the talking!

BUY A FLAT WORTH ₹ 75 LAKHS

Ajay: Let's say you buy a decent 2 BHK flat worth Rs.75 lakhs in a non-metro city. Your down payment (15%) will be around ₹11.25 lakhs and you will have to take a loan worth ₹63.75 lakhs. Your EMI for 20 years at 8.75% interest will be around ₹56,350. The first question that comes up is, whether you are earning at least ₹80-90,000 per month so that the EMI is affordable. If not, better scale down your house budget to a 1BHK or rent a 2BHK which you can easily get for ₹15-20,000 max. Remember that the rental yield (rent divide by property price) is between 2-3% in all major cities.

Vijay: I think I can afford the EMIs. But I guess ₹75 lakhs is less as registration charges, brokerage, etc., should add another ₹10 lakhs.

Ajay: Very well, in that case your EMI will be almost ₹59,500/- for a 25 year period for a slightly higher > Tax benefits on both principal as loan Against amount. this. assuming a ₹20,000 rent, your monthly savings will be around ₹40,000 net of EMI which can be invested for the long term. Further, while you will save on the down payment of 15%, let us also account for rent security deposit for 6 months and then invest the

Figures are in ₹ Lakhs	10 yrs	15 y rs	20 yrs	25 yrs
Buy: Value of house (assuming 7% annual appreciation)	183 L	270 L	396 L	582 L
Buy: Outstanding loan	60 L	47 L	30 L	0
Buy: Possible Net worth	123 L	223 L	366 L	582 L
Rent: Value of (a) down payment savings (b) monthly savings net of EMI (-) Rent (assuming returns of 12%)	124 L	250 L	474 L	867 L

balance amounts. Now simplicity sake, let us ignore all society maintenance costs, brokerage / shifting costs for being on rent and income tax benefits which are available for both buyers and renters. Let us quickly work out the numbers:

Vijay: Well the figures do tell a story. Looks like saving on EMIs & investing the balance after paying rent can really help you create long term wealth.

Ajay: Yeah. But there are many assumptions here. I am assuming that you are going to live in the house that you buy. If there is a rental income, then the figures may change dramatically. Also investing an in upcoming area/locality that is unexplored, under-priced today can fetch you higher capital appreciation in the long run. Also factors like taxation are not considered since I am unsure of the tax scene for the next 20-25 years. Also others, who are now listening to our conversation, will have their own figures to work out and results may differ there.

Vijay: Hmmm.... Let us then move beyond numbers and talk in general about the advantages &disadvantages.

Ajay: Let us make the case for buying a house first. Here are the possible advantages/ Disadvantages:

- Sense of ownership, pride and respect that cannot be measured in > May involve frequent changing of numbers.
- higher Scope for capital appreciation for good /upcoming localities.
- Financial security which can be used when needed however a property is very illiquid and one may also have to wait for long to get the right buyer and the right price. Can be used as a reverse mortgage to support retirement.
- well as interest repayment on your home loan.

It can be a source for rental income in the range of 2-3% yield as of today.

Actual costs of owning a house are far more than a naked house and lots of additional expenses occur.

for Risk of title clearance, legal issues, paper work and physical hassles increases manifold. Big risk in under-construction projects for delivery.

> Finally, affordability is a big challenge and often your dream home in a preferred locality will always be out of your budget.

Vijay: Great. Now let me summarise the case for Renting option.

- In cases where rental yield is very low, on purely economic basis, it makes more sense to rent if you are not sure of living in that house for another 10-15 years.
- Savings from foregone EMIs can be invested to accumulate some wealth in the long run which can then be used to buy a house.
- You can enjoy a better lifestyle with more disposable money.
- There will be a sense of freedom and you can easily move and relocate to exploit the best career opportunities.
- Tax benefits of HRA on rent paid.
- Freedom from property maintenance, security and society issues. However, you may not live freely in the house and any changes would require owner's permissions.
- More affordable and perhaps the only feasible choice if you want to live in a house /area of your choice today.
- home which will involve expenses like brokerage, transportation, home settling hassles, etc.
- Can explore investment opportunities in real estate in upcoming cities with low property prices but high rental yields. This way you can also diversify your asset exposure for long term.

Ajay: Well looks like both buying & renting have their benefits and pitfalls. In fact, both of us would be right given our own circumstances. But one thing is for sure, one has to make an informed decision and prioritise his financial and family needs in the process.

Ajay: Finally, it looks like we have hit a middle ground. It's better that we now leave it to those listening to us to decide what they have to do.

FUND MANAGER INTERVIEWS

Mr. Ritesh Jain Chief Investment Officer (CIO) BNP Paribas Mutual Fund

Mr. Ritesh Jain has been appointed as Chief Investment Officer (CIO) of BNP Paribas Mutual Fund. In this role, he is responsible for leading a team of investment professionals managing a wide range of funds across different asset classes. Mr. Jain has close to 20 years in the Financial Services Industry and has held leadership positions in various Asset Management Companies. Prior to BNP Paribas Mutual Fund, Mr. Jain was the Chief Investment Officer at Tata Asset Management. Mr. Jain is a forward thinking leader with a passion for growing businesses in a dynamic market environment. His experience and expertise have entailed significant portfolio growth and development. His investment philosophy is characterized by a long-term view and he believes in a participatory approach to leadership coupled with cross functional collaboration and strong team work.

Mr. Jain is a keen follower of current affairs and his articles regularly feature in leading financial publications such as Economic Times, Mint, The Wall Street Journal et al. He is also the author of a weekly column in ET markets, "What I read" which has a 50000. readership of over Academically, he has completed his Master of Business Economics in 1997. He has an active interest in travelling, playing squash and keeping abreast with local and global affairs.

Q. A big debate on demonetisation followed the disclosure from RBI that 99% of all currency has returned to the banking system. As a fund house, what would be your take on the net merit or demerit of demonetisation?

Answer: We will have to see Demonetisation in a broader context and in light of the stated agenda of the government to clamp down on the parallel economy. Government has initiated various steps to reduce the size of the parallel economy and widen the Tax base and demonetisation had been a very important and strong step in this endeavour.

One can argue that a strong step like demonetisation has costs which exceed the benefits and probably it is true for the short term, but the jury is still out on that and one has to wait to see what follow-on actions government takes and the results it yields to take a final view on demonetisation

Q. The government has been making policy and regulatory changes to ensure greater recovery of NPAs including power to banks to initiate recovery proceedings. As a market player, how do you feel these initiatives will impact the markets?

Answer: Banking sector credit growth has hit multi decade lows and for the overall sentiment to improve the credit environment is very critical. As a result of the lingering NPA issue, the burden of financial intermediation is increasingly falling on the non-banking segment of the financial market i.e. NBFC's and Mutual Funds which also means that the risk is getting transferred from one segment to the other and at a pace which is probably not good.

So both from the perspective of enhanced risk taking in the non-banking segment of the financial market as well as for the credit environment to improve, the success of these initiatives is very critical for the long term health of the financial markets.

Q. Recently RBI reduced the policy repo rate and reverse repo rate by 0.25% to 6% and 5.75% respectively. Please explain why and how does these policy rates impact investor returns in debt funds?

Answer: The bond markets had already factored in the rate cut by RBI and we have seen the returns of debt scheme improving even before the rate cut announcement by RBI. Generally as the interest rates come down, debt funds with longer duration tend to give higher returns because of capital appreciation as bond prices rise with lower yields. RBI Policy rates, to a large extent, determine the overall yields in the bond market and hence any movement in Policy rates becomes important for investors in Debt Funds as they are the signal given by the RBI regarding interest rates in the economy.

Q. A recent study suggested that farm loan waivers could reach ₹2.7 lakhs across India by 2018. While this might help increase consumption to some extent, it also increases the borrowings of the states. In your view, how does loan waivers impact the economy in general and what does it mean for the debt markets?

Answer: Farm Loan waivers are negative for the debt markets as they increase the supply of state development loans (SDL) in the market and the higher borrowings increase overall interest rates. It also crowds out the private sector investments increasing the funding cost for the productive sectors of the economy.

It also leads to moral hazard and spoils the overall credit culture in the economy and is not a good policy measure to alleviate rural stress.

Q. What is your take on the interest rates going forward? Accordingly, what is your fund house' duration / investment strategy?

Answer: We believe that Interest rates have bottomed out and we are unlikely to see any further reduction in the policy rates by RBI as we expect Inflation to move higher incrementally. The August CPI Inflation has come in at 3.36% and the core Inflation has shot up from 4.1% to 4.6%, which is worrisome and also the fact that monsoon has not been good with spatial distribution being quite skewed. Globally commodity prices are rising, which does not augur well for Inflation. (Source: CEIC)

The central government fiscal environment is challenging with fiscal deficit already reaching 94% of the budgeted amount. State finances are also likely to deteriorate with the spate of farm loan waivers announced and all this along with an uncertain global environment, we believe that it is better to consider investments in low duration funds like Short Term Income funds and accordingly our approach would be to reduce risk both in terms of duration and credit.

Q. What would you suggest to a long term investor following an asset allocation strategy and thereby investing in debt?

Answer: Investor could consider short and medium term debt funds in the current environment to a long term investor from an asset allocation perspective.

Mutual funds can use IRF to hedge risks, says SEBI

Providing more leeway, SEBI allowed mutual funds to use interest rate futures contracts to hedge risks from volatility in interest rates. An IRF provides for future delivery of an interest- bearing security such as government bonds and such contracts provide an avenue to hedge against risks arising from fluctuations in interest rates. Besides, mutual funds will have to disclose about the hedging positions through IRF in respective debt portfolios, details of IRFs used for hedging along with debt and money market securities transacted on its website, and investments made in interest rate derivatives in the monthly portfolio disclosure. In case, the IRF (interest rate future) used for hedging the interest rate risk has different underlying security than the existing position being hedged. SEBI said that it would result in imperfect hedging. Imperfect hedging will be exempted from the gross exposure, up to maximum of 20 per cent of the net assets of the scheme, provided exposure to IRFs is created only for hedging the instrument based on the weighted average modified duration of the bond portfolio or part of the portfolio. Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, in case the correlation between the portfolio and the IRF is at least 0.9 at the time of initiation of hedge.

Indian mutual funds may get nod for trading in commodity derivatives

India's capital markets regulator is likely to allow mutual funds to trade in commodity derivatives and a decision is expected within six months, a senior official has said. Such a move would help deepen the market and provide hedging opportunities to large companies that trade overseas due to limited liquidity at local exchanges. Portfolio management services and foreign trading houses that export or import from India could also be allowed to participate in commodity futures, said S.K. Mohanty, an executive director with the Securities and Exchange Board of India.

NEWS UPDATE

India on firm growth path with bold moves like note ban, GST: Opec

India is experiencing some of the greatest structural changes as bold new reforms like note ban and GST have put the country firmly on a sustainable growth path, oil cartel Opec's Secretary General Mohammed Barkindo has said. Speaking at the India Energy Forum by CERAWeek, he said the country's expanding middle class represents a growing source of mand, not just for energy but for goods and services from around the world. Reforms, including demonetisation policy, the Goods and Services Tax (GST), and efforts to diversify the energy mix have all been designed to move the country toward sustainable growth and stability, he said.

India expected to become \$6 trillion economy in 10 years: Morgan Stanley

India is expected to be a \$6 trillion economy, the third largest in the world, in the next 10 years, majorly helped by digitisation, says a report. According to global brokerage Morgan Stanley, India's digitisation drive would provide a boost of 50-75 basis points to GDP growth in the coming decade. We estimate that digitisation will provide a boost of 50-75 basis points to GDP growth and forecast that India will grow to USD 6 trillion economy and achieve upper-middle income status by by 2026-27, according to Morgan Stanley head India research and India equity strategist Ridham Desai. We expect India's real and nominal GDP growth to compound annually by 7.1 per cent and 11.2 per cent respectively over the coming decade, he added.

Amid economic slowdown, Modi govt sticks to FY18 borrowing target

An economic slowdown following the launch of a nationwide Goods and Service Tax (GST) in July have put federal revenues under pressure, raising worries that New Delhi will struggle to trim its fiscal deficit. In February, Finance Minister Arun Jaitley had budgeted to raise 5.8 trillion rupees (\$88.57 billion) in 2017/18 via bond sales to bridge the

NEWS UPDATE

fiscal deficit of 3.2 percent of GDP. However, the deficit has already crossed 92 percent of the full-year target. Adding to the concern, GST collections fell 3.6 percent in August from July. Yet, Economic Affairs Secretary Subhash Chandra Garg said that the Govt would leave the full-year borrowing target intact and sell bonds worth 2.08 trillion rupees (\$31.77 billion) between October and March.

Cement demand growth expected to be around 3.5-4% in FY18

Rating agency ICRA has downgraded its forecast for cement demand growth to 3.5-4 per cent for 2017-18 on account of delay in revival in the first half of the fiscal. According to the agency, the cement demand is expected to be muted in the second quarter of FY2017-18 due to issues such as monsoons and the GST implementation. However, ICRA expects the cement demand to rebound from the October-December quarter onwards. Demand in the first quarter was "adversely impacted" led by factors as shortage of sand in a few southern and northern states, implementation of the Real Estate Regulatory Authority (RERA) and slowdown in the construction activity in West.

Realty sector to have over 17 mn workforce by 2025: Credai

The realty sector is likely to add another 8 million jobs by 2025 driven by initiatives like new real estate regulatory law and the GST, says a report. According to realtor's body CREDAI and consultant CBRE's joint report 'Assessing the Economic Impact of India's Real Estate', the contribution of real estate sector in the country's GDP is expected to double at 13 per cent by 2025. The potential employment opportunities in the real estate sector are expected at 17.2 million jobs by 2025 up from 9.2 million in 2016. The economic contribution of the real estate sector is projected to increase significantly during the period from 6.3 per cent in 2016 to almost 13 per cent in 2025, CBRE said in a statement.

NEWS UPDATE

Digital India to drive FMCG consumption worth \$45-bn by 2020

Underlining the rapid growth of digital in India, 40 per cent of consumption in the Fast Moving Consumer Goods (FMCG) segment worth \$45 billion will be driven digitally by 2020. According to the report by Google India and Boston Consulting Group (BCG), there will be 650 million Internet users by 2020, with the highest growth coming from non-metros owing to increasing mobile penetration. This mass reach will have a big impact for FMCG companies and influence categories such as baby-care and beauty.

Net direct tax collections grow 16% to ₹ 3.86 lakh cr in April-Sept

The provisional figures of direct tax collections up to September 2017 show that net collections are at Rs 3.86 lakh crore, which is 15.8 per cent higher than the net collections for the corresponding period last year, Central Board of Direct Taxes (CBDT) has said. The net direct tax collections represent 39.4 per cent of the total budget estimates of direct taxes for 2017-18 (₹ 9.8 lakh crore). Gross collections (before adiustina refunds) have for increased by 10.3 per cent to ₹4.66 lakh crore during April to September, 2017. The refunds amounting to ₹79,660 crore have been issued during April to September, 2017.

Government sets up high-level 5G India forum, eyes rollout by 2020

Aiming to keep pace with the global rollout of 5G, the Indian government has set up a High-Level 5G India 2020 Forum, Communications Minister Manoj Sinha has said. We want to keep pace with the global technology adoption. India does not want to stay behind in 5G rollout. That is the reason we have constituted this committee. 5G will enhance GDP, create employment and digitise the economy, he added. The government will create a corpus of ₹ 500 crore for 5G rollout.
